Browse the Web

Use the address bar like a search box in SDDBrowser to look for content.

1. On your computer, open SDDBrowser.
2. In the address bar at the top, enter your search.
3. Press Enter.
4. This will change the page you are currently on.

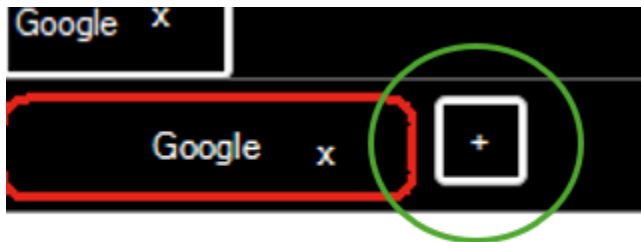

Note: Your search history is not saved on your computer.

Tabs

Opening Tabs

You can open as many tabs as you want in SDDBrowser. You can also view all your tabs and switch between them.

1. On your computer, open SDDBrowser.
2. In the tab bar at the top there is a button with a “+” symbol.
 - a. If the tabs overflow, you can scroll right to find it. It is always at the end
3. Upon clicking it, a new tab opens. This will be the focused tab.

Closing Tabs

For all tabs you open, you can also close each tab on the SDDBrowser. If all tabs are closed a new tab will appear.

1. On your computer, open SDDBrowser.
2. Move your cursor to the right side of the title text.
3. On each tab there is a close button, next to the title text, with an “x” symbol.
 - a. If you cannot see it, that is because you are not hovering over it.
 - b. The colour of the button should change to signify that you are hovering over it.
4. Upon clicking it, the tab will close.

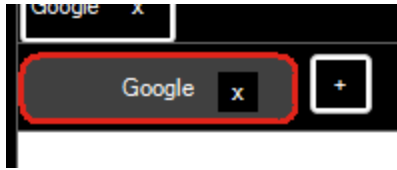

Note: If you close the tab you are currently on, it will move to the last tab that you opened.

Changing Tabs

You are also capable of changing tabs back to the tabs you previously opened.

1. On your computer, open SDDBrowser.
2. Each tab is a button, with a solid rounded border.
3. Upon clicking it, the tab will change to the one clicked on.
 - a. The tab should change colour when you are hovering over it.

Note: That there is a close button, near the right of the tab. If you click that the tab will be closed.

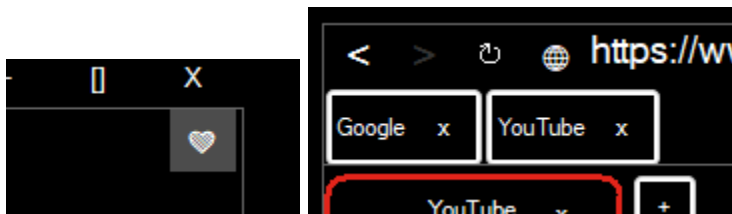

Also if you move your mouse too much while holding down the left mouse button then a new window will be created. Simply place the browser into the tab bar and release when the browser has changed colour.

Bookmarks

Creating Bookmarks

You can create as many bookmarks as you want in SDDBrowser. You can also view all your tabs and switch between them.

1. On your computer, open SDDBrowser.
2. In the top right, next to the Search Bar is a heart.
3. Upon clicking it, a new bookmark is made.
 - a. It should change colour.
4. A new bookmark will appear above the tab bar. These notably have sharper edges.

Note: These bookmarks are saved on your computer and are unique for each [content panel](#).

Also, two bookmarks of the same URL cannot be created, although multiple URLs can lead to the same webpage and therefore have multiple bookmarks.

Deleting Bookmarks

For all bookmarks you have, you can also delete each bookmark on the SDDBrowser.

1. On your computer, open SDDBrowser.
2. Move your cursor to the right side of the title text, with an "x" symbol.
3. On each bookmark there is a close button, next to the title text.
 - a. The colour of the button should change to signify that you are hovering over it.
4. Upon clicking it, the bookmark will be deleted.

Opening Bookmarks

To use your bookmarks, you can open the bookmark and create a tab with the URL of the bookmark.

1. On your computer, open SDDBrowser.
2. Each bookmark is a button, with a solid border.
3. Upon clicking it, a new tab will be created with the bookmark's URL.
 - a. The bookmark should change colour when you are hovering over it.

Note: Spamming the bookmark can cause a large amount of lag and potentially crash the browser.

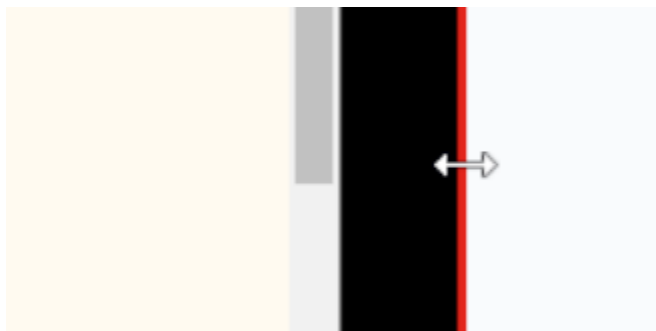

Resizing the Window

Each Window of the SDDBrowser is resizable and movable.

To resize

1. On your computer, open an SDDBrowser window.
2. By clicking on one of the coloured borders you should be able to drag it in order to resize the window. The cursor should change to dictate the direction of resizing.

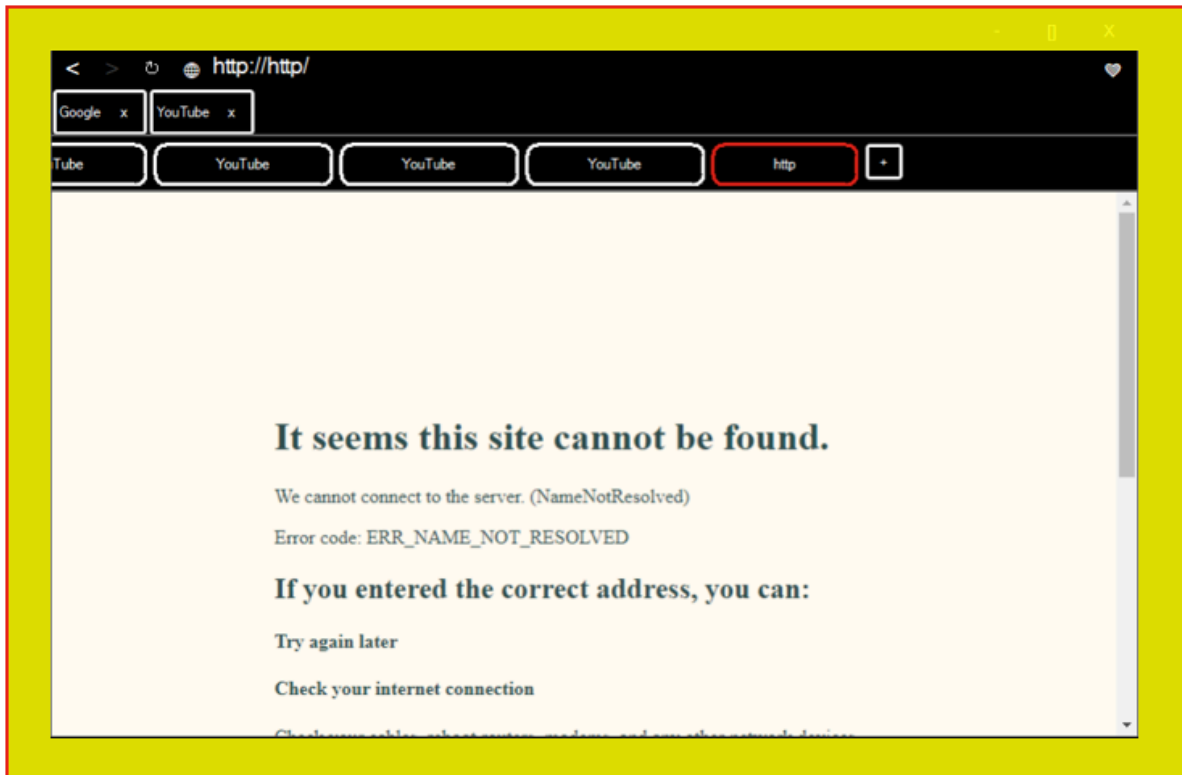

To move

1. On your computer, open an SDDBrowser window.
2. By clicking on the thicker inner border you should be able to drag it in order to move the window. The cursor should change to dictate the direction of moving.

Note: If the window is fullscreened, the window will revert to its smaller form.

Further, if the tab is released near the borders of the screen it will snap to that part of the screen. If you seek to avoid this, grab the side that is away from the border of the screen you wish to position the window near.

Areas are highlighted yellow in this image.

New Window

New windows can be created. This can be done by dragging a [tab](#).

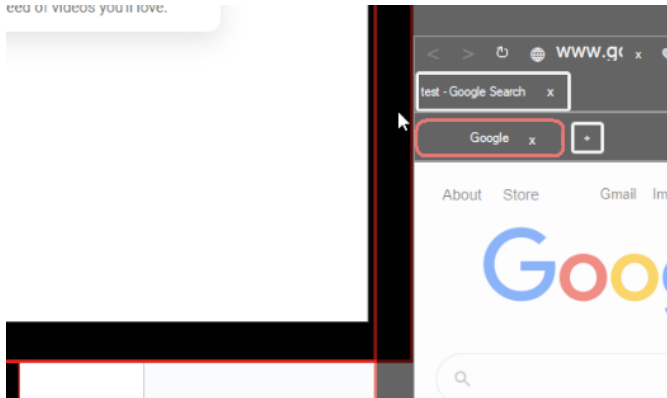

To open by dragging.

1. On your computer, open SDDBrowser.
2. By holding the left click on the tab button and then moving the mouse, a new window will be created.

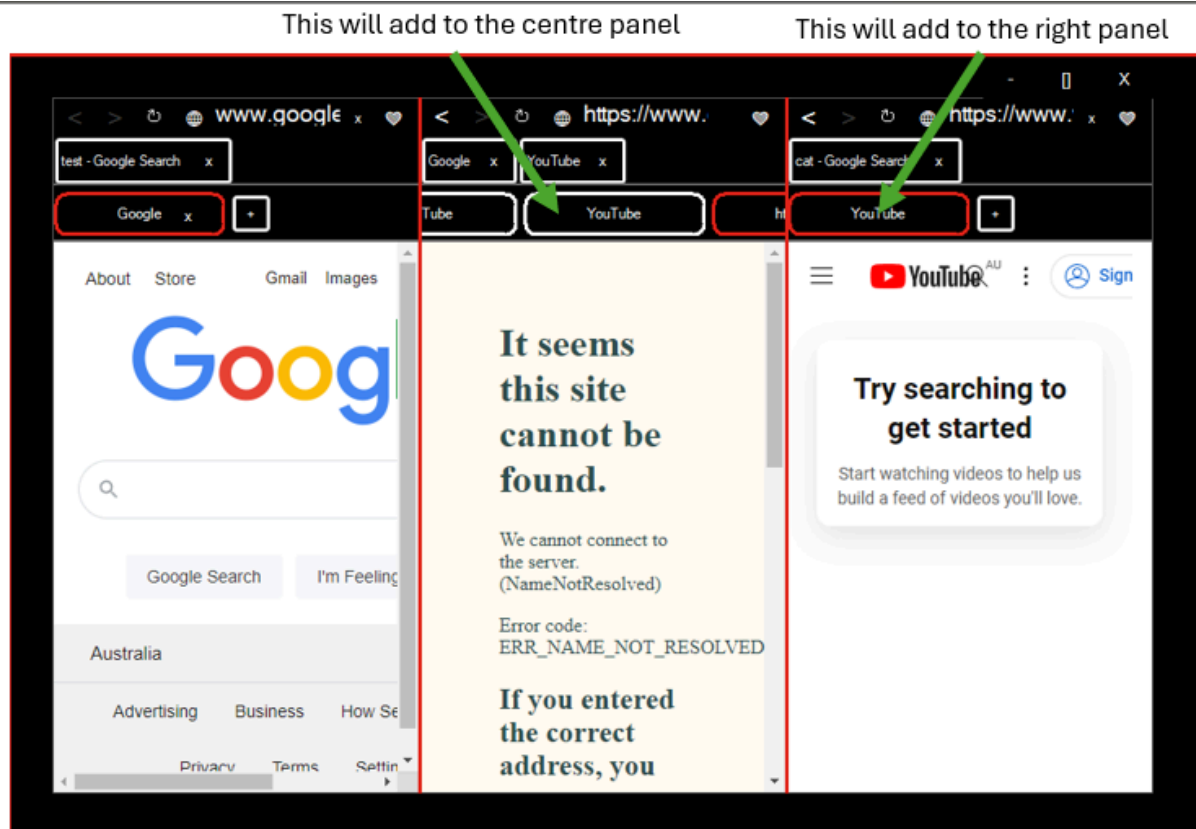

Note: If the window turns transparent then it is being [merged](#) to the instance behind it. This can be done through other applications so be aware of this.

Content Panel

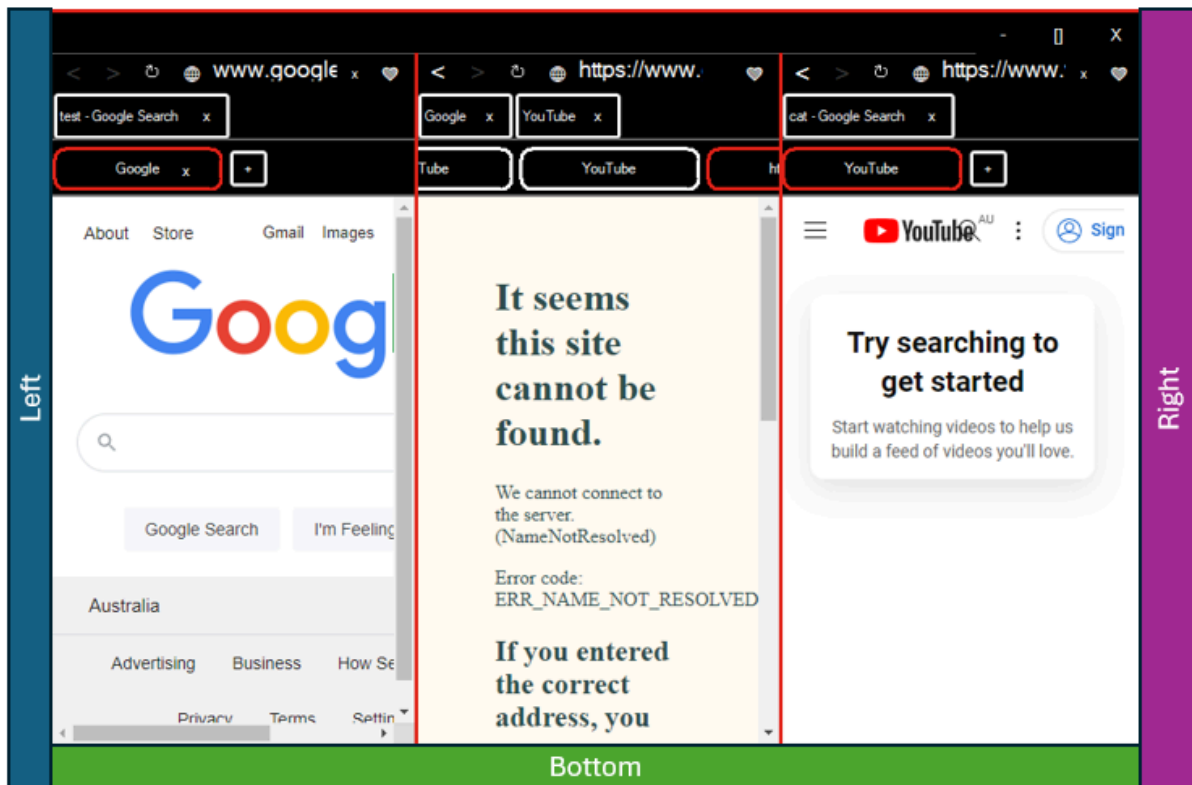

By [dragging a window](#) over a certain part of another window, then the two windows will merge. This will add all the tabs of the window that is being dragged into the Content Panel of the window depending on where the window is released.

If the window is released in a tab bar then all tabs in the window will be added to the content panel containing that bar.

To create content panels and to also add to them, each panel also has a zone in the thicker border where if the window is released in this area, the tabs will add to that panel or if the panel does not exist, the panel will be created.

Changing Colours

To change colours, simply change the system colours of your Windows device.

1. On your computer, open Settings.
2. Click personalization
3. Here you can change the colour scheme and theme.
 - a. You can also change the accent colour which will change the border colours and highlight colours.
